**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### **DETAILED ACTION**

Claims 1-21 are pending.

#### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8, 14-17, 20, and 21 and 9-13, in part, drawn to vectors and yeast host cells comprising a DNA sequence encoding a plant aspartic proteinase and methods of making the encoded protein.

Group II, claim(s) 18 and 19, drawn to a method for detecting a plant aspartic proteinase.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reasons: The technical feature linking Groups I and II appears to be that they all relate to plant aspartic proteinases. However, Cordeiro et al, 1994 teach that plant aspartic proteinases were known in the art. Therefore, Groups I and II share no special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art. Furthermore, the methods of Group II not do comprise all of the methods for making or using the products of Group I.

Accordingly, Groups I and II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Art Unit: 1652

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

For Group I:

(A) Cyprosîn; and

(B) Cardosin.

(C) yeast host cells that produce a plant aspartic proteinase with milk clotting activity and which cleaves milk casein; and

(D) yeast host cells that produce a plant aspartic proteinase capable of giving cheese a special taste.

Applicant is required, in reply to this action, to elect a single species from (A)-(D) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 1652

(A) Cyprosin: Claims 5 and 12.

(B) Cardosin: Claims 6 and 13.

(C) an aspartokinase that cleave casein: Claim 20.

(D) an aspartokinase that give cheese a special taste.

The following claim(s) are generic: Claims 1-4, 7-11, and 14-21 are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The technical feature that links (A)-(D) are that they are all plant aspartic proteinases. However, aspartic proteinases are known in the art and, thus, said technical feature is not a special technical feature that provides unity of invention. In addition, the products of (A)-(D) do not share the same structure and/or function.
